

Farmaceutska
Kozmetička
Medicinska
Ambalaža

Uniplast je regionalni lider na tržištu u proizvodnji i distribuciji farmaceutске, medicinske i kozmetičke – ambalaže. U toku 27 godina rada, samostalno smo razvili preko 150 različitih proizvoda, u koje su utkani znanje, ideje i trud koji su garancija besprekornog i konstantnog kvaliteta.

Uniplast čini mlad tim ljudi privržen iskrenosti, duhu poštovanja i nege odnosa sa klijentima kao osnovim vrednostima vizije koju svakoga dana pretvara u stvarnost. Poštovanje dogovora i briga o potrebama klijenata su kompaniji doneli reputaciju pouzdanog partnera na svim tržištima na kojima posluje. Uvek nastojimo da svojim proizvodima, uslugama, i načinom poslovanja prevaziđemo očekivanja klijenata i budemo im dugoročno pouzdan partner.

Tim kompanije Uniplast lepotu poslovanja pronalazi u kreativnom okruženju koje motiviše i inspiriše sve one koje su dodirnuli njihovim proizvodima i uslugama. Sa svojim partnerima ostvarujemo odnos maksimalnog poverenja i korektne saradnje, sa ciljem da im ponudimo ekskluzivne proizvode vrhunskog kvaliteta, prilagođene njihovim potrebama i zahtevima, koji će im poboljšati prodaju i olakšati put do uspeha, jer moto kompanije je: "Vaš uspeh je naš uspeh".

Uniplast is a regional leader in manufacture and distribution of pharmaceutical, medical and cosmetic packaging. Within over 27 years of operation, we have developed over 150 different high quality products based on own knowledge, ideas and efforts.

Uniplast is a team of young people committed to vision of honesty, spirit of respect and care towards clients that becomes reality. By respecting agreements and care of customer needs, the company gained reputation of trusted partner in the markets in which it operates, though it always strives to outperform customers expectations and to be reliable partner on the long term basis.

The Uniplast team finds the beauty of doing business in a creative environment that motivates and inspires all those that are in touch with their products and services. With our partners, we achieve relationship of maximum trust and fair cooperation with an aim to offer the exclusive, superior quality products, tailored to their needs and requirements, that will improve their sales and facilitate the way to success.

The company motto is: "Your score is our achievement".

ISO 9001	Q-1969
ISO 14001	E-566
ISO 13485	M-122
ISO 15378	Me-002
BS OHSAS 18001	H-133

Preko 10 godina Uniplast poseduje sertifikate kojim potvrđuje da upravlja integrisanim sistemom menadžmenta organizacije (sertifikati ISO 9001, ISO 14001 i OHSAS 18001). Od 2016.godine-implementiran je i standard ISO 15378: Primarno pakovanje medicinskih i farmaceutskih proizvoda sa posebnim osvrtom na dobru proizvodjačku praksu (GMP). U 2017.godini Uniplast je implementirao i standard 13485:2016 za proizvodnju, razvoj, i prodaju proizvoda IVD (in vitro dijagnostička medicinska sredstva) sterilna i nesterilna: URIN ČAŠE, PETRIJEVE ŠOLJE, BRIS I FECES POSUDE.

For over 10 years, Uniplast has certificates confirming that it has implemented the integrated company management system (ISO 9001, ISO 14001 and OHSAS 18001). In 2016 - implemented ISO 15378: Primary packaging of medical and pharmaceutical products with emphasis to Good Manufacturing Practice (GMP). In 2017 Uniplast implemented 13485: 2016 standard, related to production, development and sale of the IVD (in vitro diagnostic medical devices) sterile and non-sterile: Urine cups, Petri dishes, Swab & Feces containers.

Projekat za istraživanje i razvoj AKTIVNE AMBALAŽE

Projekat finansira Fond za inovacionu delatnost iz budžeta Republike Srbije sa razdela Ministarstva prosvete, nauke i tehnološkog razvoja, a kroz Projekat za unapređenje konkurentnosti i zapošljavanja (sporazum o zajmu sa Svetskom bankom)

Pokušavamo da mešamo plastiku koju već znamo kako da proizvedemo, sa zeolitom koji sadrži jone srebra. Zeolit će oslobadjeti srebro unutar pakovanja. Joni srebra su snažan antimikrobni agens i u veoma malim koncentracijama uništava većinu patogenih mikroorganizama. Važno je istaći da joni srebra u ovoj koncentraciji ne utiču na sadržaj ambalaže.

Osnovni ciljevi za Aktivnu ambalažu su:

- Uništavanje patogenih mikroorganizama ili zaustavljanje reprodukcije istih
- Stvaranje proizvoda koji su sigurniji za potrošače
- Produžetak roka trajanja bez upotrebe konzervansa, što je bolje za potrošače

Granulat pomešan sa zeolitom koji sadrži jone srebra će se upotrebiti za pakovanje u farmaceutskoj industriji, industriji kozmetike i drugim industrijskim granama gde je neophodno primeniti ovakvu Aktivnu ambalažu. Projekt za istraživanje i razvoj će trajati 2 godine, a nakon toga će se komercijalizovati.

Project ACTIVE PACKAGING is starting for research and development

The project is financed by the Innovation Fund from the budget of the Republic of Serbia from the division of the Ministry of Education, Science and Technological Development, through the Serbia Competitiveness and Jobs Project (loan agreement with the World Bank).

What we are trying to do is to mix plastic, which we already know to do, with zeolite which contains silver ions. Zeolite is going to release silver inside the packaging. Silver ions are very strong antimicrobial agents and at very small concentrations they will kill the most of pathogenic microorganisms. It is important to say that at this concentrations silver ions do not interfere contain of packaging.

- Main goals of Active packaging is:
- To kill pathogenic or stop reproduction microorganisms
- Making product safer for consumer

Increasing shelf life without conservans which is more better for consumerv Granulate mixed with zeolite which contains silver ions will be used for packaging in pharmaceutical, food, cosmetic and other industries that needs to be Active packaging. Project for research and development will be 2 years and after that will be commercialized.

Plastične boce sa sigurnosnim tamper proof zatvaračem
Plastic bottles with tamper-evident band

Plastične boce sa sigurnosnim tamper proof zatvaračem Plastic bottles with tamper-evident band

Plastične boce sa sigurnosnim zatvaračem (plastični kontejneri) za farmaceutsku upotrebu namenjene su za pakovanje (čuvanje) tečnih farmaceutskih proizvoda (farmaceutska supstanca, magistralni lek, galenski lek, gotov lek). Mogu da budu u direktnom kontaktu sa proizvodom. To su "tamper proof" kontejneri (poklopci sa sigurnosnim prstenom) jer obezbeđuju originalnost pakovanja i evidenciju prvog otvaranja. Materijali od kojih su napravljeni kontejneri za farmaceutsku upotrebu su opisani u Ph.Eur. i zadovoljavaju zahteve ispitivanja takođe opisane u Ph.Eur. za specifične namene. Nabavljaju se od dokazano pouzdanih proizvođača. Uslovi i metoda proizvodnje plastičnih kontejnera i zatvarača su u skladu sa ISO 9001, ISO 14001 i OHSAS 18001 standardima. Sterilnost i boja ambalaže (dokaz o aditivima), mogu biti po zahtevu kupca. Uz isporučenu robu dostavlja se sertifikat proizvođača koji čini dokumentacija o zdravstvenoj ispravnosti gotovog proizvoda (sledljivost dokumentacije proizvoda) kao i polaznog materijala uz neophodnu tehničku dokumentaciju.

Plastic bottles (plastic containers) with tamper-evident band for pharmaceutical use are used for packing (storing) liquid pharmaceutical products (magistral medicine, galenical medicine, ready-made medicines, and pharmaceutical substance). They can be in direct contact with the product. These containers are „tamper-proof“ (closures with tamper-evident band) because they ensure that the container is original and not opened. The pharmaceutical plastic containers are made from materials that are described in Ph.Eur. and they meet the criteria of the specific use assessment that are also described in Ph.Eur. We buy the materials from highly reliable producers. Bottles under catalogue numbers 21010, 21020, 21030 are made from low-density polyethylene and they meet the pharmaceopeic requirements. They are used for storing multi-dose packets of ophthalmological products (10-30ml), i.e. non-sterile liquid pharmaceutical products. The conditions and the method of production of plastic containers and closures are in accordance with the following standards: ISO 9001, ISO 14001, and OHSAS 18001. Customers can choose the colour of the container (proof of additives) and whether they want containers to be sterile or not. With the containers we deliver producer's certificate that is accompanied by technical documentation and documentation which states that the final products and materials they are made from are safe for health (traceability of product's documentation).

Sigurnosni tamper proof zatvarač sa integrisanom kapaljkom Plastic bottles with tamper-evident band

Sve boce iz našeg asortimana plastičnih boca sa sigurnosnim tamper proof zatvaračem mogu biti sa integrisanom kapaljkom u zatvaraču.

- skraćuje proces pakovanja sa 3 na 2 koraka
- štedi vreme koje ćete provesti u punjenju i pakovanju proizvoda
- kod sterilnih proizvoda smanjuje mogućnost kontaminacije prilikom rukovanja

All bottles from our range of plastic bottles with safety tamper proof cap could have the integrated dropper within the cap:

- Reduces the packaging process from 3 to 2 steps
- Saves the time you spend in product filling and packing
- Reduces the possibility of contamination while handling the sterile products

Plastične boce / Plastic bottles

Plastične farmaceutske boce (plastični kontejner) za farmaceutsku upotrebu (zatvarač je deo kontejnera) namenjen za čuvanje farmaceutskog proizvoda (farmaceutske supstance, magistralnog leka, galenskog leka i gotovog leka - tečni farmaceutski oblik). Može da bude u direktnom kontaktu sa proizvodom. Boce pod katalogskim brojem 18 su izradjene od polietilena niske gustine koji odgovaraju farmakopejskim zahtevima i koriste za čuvanje visedoznih pakovanja oftamoloskih preparata (5-30 ml), odnosno nesterilnih tečnih farmaceutskih oblika.

Materijal od kojih su napravljeni kontejneri za farmaceutsku upotrebu su opisani u PH. Eur i zadovoljavaju zahteve ispitivanja takodje opisane u Ph. Eur. za specificne namene. Nabavljaju se od dokazano pouzdanih proizvođača. Uslovi i metoda proizvodnje plastičnih kontejnera i zatvarača su u skladu ISO 9001, ISO 14001 i OHSAS 18001. Sterilnost i boja ambalaže (dokaz o aditivima), veličina pakovanja mogu biti po zahtevu kupca. Uz isporučenu robu dostavlja se dokumentacija o zdravstvenoj ispravnosti polaznog materijala i gotovog proizvoda (sledljivost dokumentacije proizvoda) kao i tehnička dokumentacija.

Plastične kutije sa navojem / Plastic jars with thread

Plastične kutije sa navojem / Plastic jars with thread

Plastične kutije (plastični kontejneri) za farmaceutsku upotrebu (zatvarač je deo kontejnera), namenjene su za pakovanje (čuvanje) polučvrstih farmaceutskih proizvoda (farmaceutska supstanca, magistralni lek, galenski lek, gotov lek). Mogu da budu u direktnom kontaktu sa proizvodom. Svaki plastični kontejner iz ponude može imati međupoklopac. Materijali od kojih su napravljeni kontejneri za farmaceutsku upotrebu su opisani u Ph. Eur. i zadovoljavaju zahteve ispitivanja takode opisane u Ph. Eur. za specifične namene. Nabavljaju se od dokazano pouzdanih proizvođača.

Uslovi i metoda proizvodnje plastičnih kontejnera i zatvarača su u skladu sa ISO 9001, ISO 14001 i OHSAS 18001 standardima. Sterilnost i boja ambalaže (dokaz o aditivima) mogu biti po zahtevu kupca. Uz isporučenu robu dostavlja se sertifikat proizvođača koji čini dokumentacija o zdravstvenoj ispravnosti gotovog proizvoda (sledljivost dokumentacije proizvoda) kao i polaznog materijala uz neophodnu tehničku dokumentaciju.

Plastic jars (plastic containers) for pharmaceutical use (the closure is part of the container) are used for packing (storing) semi-solid pharmaceutical products (pharmaceutical substance, magistral preparation, galenic preparation, prepared medicine). They can be in direct contact with the product. Every plastic container in our offer can have an inter-closure. The materials used for the production of the containers for pharmaceutical use are described in Ph.Eur. and they comply with the examination demands, also described in Ph. Eur. for specific purposes. They are bought from justly reliable suppliers.

The conditions and production method of plastic containers and closures comply with ISO 9001, ISO 14001 and OHSAS 18001 standards. Sterility and the package colour (proof for additives) can be on buyer's demand.

Manufacturer's certificate, including the documentation of the health safety of the finished product (following product documentation), as well as the starting material with the necessary technical documentation, is delivered together with the goods.

Spray bottles (plastic containers) for pharmaceutical use (a closure is a part of the container) are used for packing (storing) liquid pharmaceutical products (magistral medicine, galenical medicine, ready-made medicines). They can be in direct contact with the product. The pharmaceutical plastic containers are made from materials that are described in Ph.Eur. and they meet the criteria of the specific use assessment that are also described in Ph.Eur. We buy the materials from highly reliable producers. The conditions and the method of production of plastic containers and closures are in accordance with the following standards: ISO 9001, ISO 14001, and OHSAS 18001. Customers can choose the colour of the container (proof of additives) and whether they want containers to be sterile or not. With the containers we deliver producer's certificate that is accompanied by technical documentation and documentation which states that the final products and materials they are made from are safe for health (traceability of product's documentation).

Supoforme i vagiforme / Vagitories and suppositories

Supoforme i vagiforme / Vagitories and suppositories

Plastični kontejneri za farmaceutske upotrebu (zatvarač je deo kontejnera) namenjeni su za pakovanje (čuvanje) vagitorija i supozitorija (magistralni lek, galenski lek, gotov lek). Mogu da budu u direktnom kontaktu sa proizvodom. Materijali od kojih su napravljeni kontejneri za farmaceutske upotrebe su opisani u Ph. Eur. i zadovoljavaju zahteve ispitivanja takođe opisane u Ph. Eur. za specifične namene. Nabavljaju se od dokazano pouzdanih proizvođača.

Postoji mogućnost pakovanja u sekundarnu plastičnu ambalažu (kataloški broj 16125). Uslovi i metoda proizvodnje plastičnih kontejnera i zatvarača su u skladu sa ISO 9001, ISO 14001 i OHSAS 18001 standardima. Sterilnost i boja ambalaže (dokaz o aditivima) mogu biti po zahtevu kupca. Uz isporučenu robu dostavlja se sertifikat proizvođača koji čini dokumentaciju o zdravstvenoj ispravnosti gotovog proizvoda (sledljivost dokumentacije proizvoda) kao i polaznog materijala uz neophodnu tehničku dokumentaciju.

Sterilni proizvodi / Sterile products

Jedna od najzahtevnijih operacija kod plastičnih materijala je proces sterilizacije. Oni se ne mogu sterilisati toplotom na visokim temperaturama, jer dolazi do trajne fizičke deformacije.

Sterilizacija ambalaže postiže se izlaganjem proizvoda jonizujućem zračenju (γ zračenju) ili obezbeđivanjem penetracije gasa i vlage u material koji se steriliše (sterilizacija gasom).

Proizvodi koji se pakuju za sterilizaciju su pakovani u višeslojnu ambalažu kako bi zadovoljili zahteve korisnika (standarda) za adekvatan prelazak proizvoda iz niže klase u višu klasu čistoće.

Svaku isporuku sterilnih proizvoda prati adekvatna dokumentacija o sterilizaciji.

Efikasnost primenjenog procesa za svako sterilizaciono punjenje se proverava pomoću odgovarajućeg biološkog indikatora.

The process of sterilization is among the most complex ones when dealing with plastic materials. Plastic materials cannot be sterilized with high temperature because they would be permanently physically deformed.

The containers are sterilized with ionizing radiation (γ radiation) or with gas and moisture (gas sterilization).

Products which are packed for sterilization are packed in multilayer packaging in order to meet customer's requirements (standards) for proper upgrade of products from lower to higher level of purity.

Every batch of sterilized products is accompanied by an adequate sterilization documentation. The efficiency of every sterilization process is checked by an adequate biological indicator.

Staklene boce / Glass bottles

Stakleni višedozni kontejneri tip III (od natron silika stakla koje je obojeno i ima umerenu hidrolitičku otpornost) za farmaceutsku upotrebu odgovaraju farmakopejski definisanim testovima. Namijenjeni su da budu u direktnom kontaktu sa farmaceutskim preparatima.

To su „tamper-proof“ kontejneri (poklopci sa sigurnosnim prstenom) jer obezbeđuju originalnost pakovanja i evidenciju prvog otvaranja. Zatvarači (unutrašnji i spoljašnji) su napravljeni od materijala polietilena i sadrže dozvoljene aditive.

Materijali od kojih su napravljeni kontejneri za farmaceutsku upotrebu su opisani u Ph. Eur. i zadovoljavaju zahteve ispitivanja takođe opisane u Ph. Eur. za specifične namene.

Nabavljaju se od dokazano pouzdanih proizvođača. Uslovi i metoda proizvodnje plastičnih kontejnera i zatvarača su u skladu sa ISO 9001, ISO 14001 i OHSAS 18001 standardima.

Uz isporučenu robu dostavlja se sertifikat proizvođača koji čini dokumentacija o zdravstvenoj ispravnosti gotovog proizvoda uz tehničku dokumentaciju.

Type III multi-dose glass containers (made from natron-silicate tinted glass which has moderate hydrolytic resistance) are used in pharmacy and they meet the requirements of the assessment defined by pharmacopoeia. They are designed to be in direct contact with the pharmaceutical products. These containers are „tamper-proof“ (closures with tamper-evident band) because they ensure that the container is original and not opened. The closures (inner and outer) are made from polyethylene and they contain approved additives.

The pharmaceutical plastic containers are made from materials that are described in Ph.Eur. and they meet the criteria of the specific use assessment that are also described in Ph.Eur. We buy the materials from highly reliable producers. The conditions and the method of production of plastic containers and closures are in accordance with the following standards: ISO 9001, ISO 14001, and OHSAS 18001. With the containers we deliver producer's certificate that is accompanied by technical documentation and documentation which states that the final products are safe for health.

Kozmetičke kutije / Cosmetic containers

Kozmetičke kutije (plastični kontejneri za kozmetičke proizvode), kat.br. 13015, 13030, 13060, su namenjene za pakovanje (čuvanje) polučvrstih kozmetičkih proizvoda. Sastoje se od spoljašnjeg i unutrašnjeg dela. Spoljašnji deo je izrađen od polistirola, a unutrašnji deo od polipropilena. Kozmetičke kutije pod katalogskim brojem 23065, 23150 su izradjene isključivo od polipropilena, a kozmetička kutija pod katalogskim brojem 24100 je izradjena isključivo od polistirena.

Uslovi i metoda proizvodnje plastičnih kontejnera i zatvarača su u skladu sa ISO 9001, ISO 14001 i OHSAS 18001 standardima.

Uz isporučenu robu dostavlja se sertifikat proizvođača koji čini dokumentacija o zdravstvenoj ispravnosti gotovog proizvoda (sledljivost dokumentacije proizvoda) kao i polaznog materijala uz neophodnu dokumentaciju.

Cosmetic containers (plastic containers for cosmetic products) under the catalogue numbers 13015, 13030, 13060 are used for packing (storing) semi-firm cosmetic products. They have an inner and an outer part. The outer part is made from polystyrole and the inner one of polypropylene. Cosmetic containers under the catalogue numbers 23065 and 23150 are made entirely of polypropylene. The cosmetic container under the catalogue number 24100 is made entirely of polystyrene.

The conditions and the method of production of plastic containers and closures are in accordance with the following standards: ISO 9001, ISO 14001, and OHSAS 18001. With the containers we deliver producer's certificate that is accompanied by technical documentation and documentation which states that the final products and materials they are made from are safe for health (traceability of product's documentation).

Staklene kutije / Glass cream jars

Staklene kutije / Glass cream jars

Stakleni kontejneri tip IV za kozmetičke proizvode su izrađeni od bezbojnog natron silika stakla i imaju nisku hidrolitičku otpornost. Safe-disc, koji ima ulogu medjupoklopca, je izrađen od ekspandiranog polistirola, na kome se sa donje strane nalazi sloj aluminijuma radi čvrstoće i sloj polietilena koji je u direktnom kontaktu sa proizvodom. Ovim je obezbeđena originalnost pakovanja, evidencija prvog otvaranja i sprečavanje oksidacije kozmetičkog proizvoda. Spoljni deo poklopca je metaliziran, a unutrašnji deo je od polipropilena. Materijali od kojih su napravljeni kontejneri za kozmetičke proizvode su opisani u stručnoj literaturi i zadovoljavaju zahteve ispitivanja za specifične namene. Nabavljaju se od dokazano pouzdanih proizvođača. Uslovi i metoda proizvodnje opisanih staklenih kontejnera i zatvarača su u skladu sa ISO 9001, ISO 14001 i OHSAS 18001 standardima. Uz isporučenu robu dostavlja se sertifikat proizvođača koji čini dokumentacija o zdravstvenoj ispravnosti gotovog proizvoda uz tehničku dokumentaciju.

Type IV glass containers for cosmetic products are made from transparent natron-silicate glass and they have low hydrolytic resistance. Safe-discs, which are inner-seals, are made from expanded polystyrole. On the bottom of safe-discs there is a layer of aluminum that provides firmness and a layer of polyethylene which is in direct contact with the product. Safe-discs ensure that the container is original and not opened. They prevent the cosmetic products from oxidizing. Outer part of the closure is metalized and the inner one is made from polypropylene. The containers for cosmetic products are made from materials that are described in technical literature and they meet the requirements of the specific use assessment. We buy the materials from highly reliable producers. The conditions and the method of production of the glass containers and closures are in accordance with the following standards: ISO 9001, ISO 14001, and OHSAS 18001. With the containers we deliver producer's certificate which consists of technical documentation and documentation which states that the final products are safe for health.

Airless boce / Airless bottles

Airless boce su namenjene za pakovanje (čuvanje) polučvrstih kozmetičkih preparata. Njihova prednost je što su bez metalnih delova, tj. proizvedene su isključivo od plastičnih komponenata. Pogon je sa automatskim samozaptivnim ventilom koji zaustavlja vazduh i sprečava kontaminaciju kao i oksidaciju preparata. Doziranje preparata je moguće u bilo kom položaju, a procenat iskorišćenja preparata je preko 98%.

Uslovi i metoda proizvodnje plastičnih kontejnera i zatvarača su u skladu sa ISO 9001, ISO 14001 i OHSAS 18001 standardima. Uz isporučenu robu dostavlja se sertifikat proizvođača koji čini dokumentaciju o zdravstvenoj ispravnosti gotovog proizvoda uz neophodnu tehničku dokumentaciju.

Airless bottles are used for packing (storing) semi-firm cosmetic products. Their advantage is that they are made entirely of plastic components, i.e. they have no metal parts. Their mechanism has an automated self-gasketing valve that stops the air and prevents contamination and oxidation of the product. Dosage of the product is possible in any position and the percentage of the product's usage is more than 98%.

The conditions and the method of production of plastic containers and closures are in accordance with the following standards: ISO 9001, ISO 14001, and OHSAS 18001. With the containers we deliver producer's certificate that is accompanied by technical documentation and documentation which states that the final products are safe for health.
